Education

McGill University — Montréal, Québec
Bachelor of Science, Major in Computer Science — September 2026 — Present

- **Clubs and Involvement**: Social Studies of Computing Research Group, Computer Science Undergraduate Society

Projects

Bookd

- Developed and shipped a football social media application using **React Native** and **Expo** and its companion web app in **React** and **Next.js** with a **Firebase** backend. Reached **30K+** downloads and **25M+** impressions and achieved a **50-minute** average daily engagement time and **25%** D30 retention rate. Featured in the **Ottawa Business Journal**.
- Architected a scheduled workflow to index football-related data from API-Football into an internal Cloud Firestore database using **Cloud Functions** and **Cloud Scheduler**. This decision enabled all client requests to fetch data from the internal database rather than the third-party API, thereby avoiding exceeding the daily request limit. The database houses the largest commercially available football repository (**150K+** matches with associated data).
- Designed a scalable social graph and feed system with social primitives (likes, comments, reposts, follows) across distinct contexts (reviews, lists, match discussions, team chats), which includes a fan-out feed-building approach to generate user content feed at scale using **Cloud Firestore** and **Cloud Functions**. Scaled to **500K+** match discussion messages and **200K+** match reviews.
- Built privacy and content controls including bidirectional user blocking with cascade-filtering through all queries, configurable spoiler modes, a content moderation pipeline using **Google Cloud Vision API** and text profanity detection, **Klipy**-backed GIF embeds, on-device translation using **Google ML Kit**, account deletion with full cascade cleanup and Instagram Stories sharing with on-device snapshot rendering.
- Designed and built Bookd Wrappd to give users summaries of their football watching activity categorised by seasons and competitions. The World Cup Wrappd reached **1K+** downloads. Served aggregated and on-demand data via **Cloud Functions** and **React Query**.

Experience

Hack4Impact McGill — Montréal, Québec
Software Engineer — September 2026 — Present

- Developing a full-stack grant and expense management platform for Resilience Montréal, a local nonprofit serving **300+** unhoused clients, using **TypeScript**, **Next.js**, **tRPC**, **Prisma**, and **PostgreSQL**.
- Built a transactional bulk-edit API with **tRPC** and **Prisma**, using atomic updates to keep fund balances consistent under concurrent edits.
- Implemented a bilingual English and French interface with **next-intl**, including ICU plural formatting.

Nokia — Ottawa, Ontario
Software Engineering Intern — July 2024 — August 2024

- Led and built a **Power Apps** application tracking **global network outages and maintenance** for Nokia's global leads. Integrated **SharePoint** to streamline entries and **Power BI** for log visualisation and insights.
- Optimised queries by indexing high-traffic columns to work around PowerApps's **500-record delegation limit**

Technical Skills

Languages: Python, Swift, Java, C, JavaScript/TypeScript, SQL
Frameworks: React, React Native, Next.js, Prisma, tRPC, Tailwind CSS, SwiftUI, PyTorch, MediaPipe, Whisper, Selenium
Technologies: Linux, Firebase, PostgreSQL, Supabase, Expo, Vercel, Figma, Gaussian, Claude Code, OpenAI API

Awards

- Greville Smith Scholarship, McGill University (**1 of 6 out of 7,000**)—$48,000
- Samsung Solve for Tomorrow regional finalist (**top 12 nationwide**)—$2,500
- Invited to speak at the **Canadian Society for Mass Spectrometry** Student Conference
- Co-authored "Probing Metal Ion Interactions in Stacked Polycyclic Aromatic Hydrocarbons as a Molecular Model for Superconductivity", published in OSURJ
